SUMMARY

Software engineer with experience building and operating microservices, APIs, and integration services for production platforms serving 100K+ users and 300+ tenants. Cut API latency 43%, led a zero-downtime platform upgrade across a multi-tenant fleet, and built reusable engineering tooling adopted team-wide. AWS Certified Solutions Architect and Azure Administrator with hands-on production experience on AWS ECS, relational databases, REST APIs, and service-to-service auth.

TECHNICAL SKILLS

Languages: Java, Python, TypeScript
Frameworks: Spring Boot, React
APIs & Integration: RESTful API design & consumption, working knowledge of GraphQL and gRPC/Protobuf, OAuth 2.0 / OpenID Connect
Cloud & Tools: AWS (EC2, ECS, S3, Lambda, RDS, VPC, SQS, CloudFront), Azure (VMs, AKS, Entra ID, Blob Storage), Docker, Git, Nginx
Data & Databases: PostgreSQL, MySQL

WORK EXPERIENCE

Associate Full-Stack Engineer — Flexisaf Edusoft Limited | *Jan 2025 – Present*

- Reduced API response latency 43% (959.5ms → 545ms average) for a platform serving 100K+ students by refining Java database queries and backend logic.
- Led a zero-downtime Docker and platform version upgrade for a critical AWS Elastic Beanstalk application supporting 300+ tenants and 100K+ users; automated a zero-downtime DNS cutover for 300+ records with Python/boto3, sequencing production traffic around TTL expiry and connection draining.
- Provide ongoing production support for containerized services on AWS ECS across the team's core products; diagnosed a recurring memory-utilization incident by isolating two contributing causes (an OpenTelemetry integration and a long-running report job) and coordinated an immediate mitigation while investigating the issue.
- Investigated a shared-CloudFront caching issue where endpoints were cached by default; identified the need for explicit cache-control headers on endpoints that should bypass caching, improving data freshness for affected APIs.
- Designed a high-scale batch data pipeline processing 2,000+ concurrent student payment uploads, eliminating memory overflows via file-based staging and manual entity manager clearing.
- Built a reflection and annotation-driven modification-logging framework comparing entity state before/after changes, cutting observability instrumentation effort 90% (40 lines to 1 line per component) and standardizing change-tracking across services.
- Architected a secure external API integration layer with multi-tenant API key management, rate limiting, and custom annotation-based authentication for third-party integrations.
- Operate within a microservices ecosystem of 4+ services, most communicating via REST, with a centralized service handling service-to-service authentication.
- Mentored 6 junior engineers on TDD best practices.
- Led internal knowledge-sharing sessions on deepening team proficiency in AWS cloud infrastructure and sharing techniques for using AI tools to accelerate development and improve engineering efficiency.

Backend Developer — Lellall Technologies Ltd | *Sep 2023 – Jan 2025*

- Owned end-to-end backend features for a grocery e-commerce platform, designing Java services that powered local market deliveries.
- Implemented secure authentication flows combining OAuth 2.0 and OpenID Connect (including Sign in with Apple) and encrypted email/password strategies, improving onboarding conversion and retention.
- Proactively monitored DigitalOcean Droplet logs to diagnose and resolve production issues, minimizing downtime.

Intern Backend Developer — Flexisaf Edusoft Limited | *Oct 2022 – Aug 2023*

- Collaborated with senior engineers to design and implement scalable backend components meeting performance and maintainability standards for institutional clients.
- Rapidly pivoted across Spring Boot, Quarkus, and GWT frameworks to deliver high-priority features for educational management systems.

PROJECTS

AI Agent: Reusable Java library enabling AI systems to dynamically invoke specified methods in a project; built a clean abstraction layer with Maven-based dependency injection. *(Java, Maven)*

StockUp: AI-powered inventory management web app with a full cloud deployment; implemented application-level caching. *(React/TypeScript, Spring Boot, Nginx, AWS EC2/VPC/Route 53/RDS/S3)*

Digital Alertness: Android wellness app that alerts users after extended social media use. *(Kotlin, Android)*

EDUCATION & CERTIFICATIONS

AWS Certified Solutions Architect – Associate
Microsoft Certified: Azure Administrator Associate
JDBC Servlets and JSP – Java Web Development Fundamentals | Spring Security 6
B.Sc. Mechanical Engineering
